APPENDIX 2
PHOTOGRAPHS OF THE SITE

All photograph locations are shown on the site plan with arrows indicating the direction in which the photo was taken.

Unless otherwise indicated, all photographs were taken during a site visit on the 13th of April 2007.
Site plan of Farm 386 Portion 22, Wysersdrift showing cultivated lands (up to date of S24G commencement) as well as photograph positions.
SECTION 24G APPLICATION
SYMINGTON TRUST
FARM 386 PORTION 22 WYSERSDRIFT
Ref: E12/2/1/1-AW11-FARM386/22

Figure 2.1: New irrigation pit with pump (facing SE).

Figure 2.2: The old irrigation pit (facing E).

Figure 2.3: Seasonal wetlands (view facing NW).

Figure 2.4: Young vines contrast with natural vegetation on the farm (facing W).
Figure 2.5a: Black wattle (*Acacia mearnsii*) near the Breede River.

Figure 2.5b: The pump used for abstracting water from the Breede River.

Figure 2.6: *Hakea sericea* growing in the adjacent Badsberg Conservancy.

Figure 2.7: An area recently cleared of vegetation (facing N).
Figure 2.8: This packed stone weir prevents water flowing along the northern boundary of the farm, and into the wetland areas (view facing NE).

Figure 2.9: The diversion channel along the south-western boundary (view facing NW).
Figure 2.10: Aerial photo of the new irrigation pit during excavation. Note that the sand excavated from the pit was spread over a wide area. This area is currently planted with vines and therefore it will be difficult to infill the pit without making further excavations elsewhere.
