South African Biodiversity GIS Maps
Showing vegetation types,
Western Cape Ecosystem Status
and SKEP Corridors
Figure 1: SANBI GIS image depicting the vegetation type of the Farm 76, Poortje Wes, Murraysburg. As indicated, two vegetation types occur on the farm namely: Gamka Karoo and Upper Karoo Hardeveld. Not to scale – the two masts are approximately 9km apart.
Figure 2: SANBI GIS image depicting the Western Cape Ecosystem status (least threatened) of farm 76, Poortje Wes and vulnerable SKEP (Succulent Karoo Ecosystem Programme) river corridors, plants and animals.

Not to scale – the two masts are approximately 9km apart.
